

What made computer engineering stand out for you?

What made computer engineering stand out to me is how it accommodates both engineering and computer science into one program. It offers a gateway to a flexible and versatile career path with programming, math, computation, and system administration and a competitive salary. The elective courses like Human-Computer Interaction and Data Science also bring in the versatility factor of this course.

Describe the factors that influenced your decision to pursue a degree in Computer Engineering.

The factors that influenced my decision to pursue this degree were my cousins who finished this course, having access to computers early on, and my friends who planned to pursue this course as well. My eldest cousin influenced me to pursue this course because he was the one who set up my family's second computer and showed me how it worked even if I didn't fully understand it, yet I gained interest from learning and figuring out how to install applications, manage files and partitions, configure system settings, and many more.
