

## 10.1.2.4 What Do You Already Know? Choosing a Windows Edition

**What Do You Already Know?** is a type of activity in which we ask you to simply take a guess! It is not meant to evaluate your knowledge. It is only meant to give you a head start thinking about different topics before they are presented in the course. You will receive additional information for the answers that you choose, so these activities also help you learn.

Read the scenario and select the Windows 10 version.

Bob is selecting a Windows operating system for use in his small business. Because Bob's business does not have an IT staff, the operating system needs to have built-in security, productivity, and management features. It must also have an intuitive user experience and support tablet mode and touchscreens.

Windows 10 Pro

Jane is selecting a Windows operating system for her personal computer. She will use the computer to complete school assignments, access email, the Internet, and to play games in the Xbox community.

Because her younger sister will also use the computer, it needs to have built-in family safety and parental controls. The price of the operating system must also fit into her budget.

Windows 10 Home

Sue is the IT director of a large organization and selecting a Windows 10 operating system for a new regional office. The operating system must have customizable features and apps. It must also allow the IT staff to deploy, manage and update devices remotely anywhere employees work. Window Defender Advanced Threat Protection (ATP) with centralized detection and prevention management is also a requirement.

Windows 10 Enterprise

Robert is a school principal and needs an operating system for his school that is designed explicitly for academic purposes and is distributed through Academic Volume Licensing. Robert is a school principal and needs an operating system for his school that is designed explicitly for academic purposes and is distributed through Academic Volume Licensing.

## 10.1.3.4 Check Your Understanding - OS Upgrades

Match each term to the appropriate definition.

<b>Upgrade Assistant</b>		<p>This is a tool for transferring selected files, folders, profiles, and applications from an old Windows PC to a Windows 10 PC.</p>
<b>User State Migration Tool</b>		<p>This is a command line utility designed to capture user accounts, files, operating system settings, and application settings, and migrate them into a new Windows installation.</p>
<b>PC Mover Express</b>		<p>This tool installs directly on a Windows computer and prepares the computer for upgrade by checking for compatibility issues and downloading all necessary files to start the install.</p>
