Concepts :

Title: Government Management System

Purpose:

- Track transactions of the government funds with the usage of peoples tax where it was used.

General Problem

People are NOT aware where the government funds are really being used by the government, meaning the government transactions lack transparency, evidence where it came from and records.

Specific Problem

Difficulties on tracking the usage of taxes, missing of consistent records if it were to be based on hearings that there's barely any evidence presented to be specific, unable to see records.

Solution

Another feature would be that beside the public website that the public can access, there also some kind of private site where different government officials or agencies can access and record the actions they did, for example if they take out a large sum of money in a bank account, it can be recorded on a log that the public can see or know.

A city-wide accessible website where citizens with the proper credentials can access the website contents, including government fund records, ongoing and cancelled projects. With this service,

citizens can access and view government funds and tax records publicly disclosed by the government for transparency and public trust.

This approaches the Republic Act No. 6713 (The Code of Conduct and Ethical Standards) https://www.ombudsman.gov.ph/docs/republicacts/Republic_Act_No_6713.pdf - **RA** and Executive Order No. 2 2016 Freedom of Information Order which gives the people/citizens the rights to access information on how the public funds are used.
